“REFUEL YOUR CAR AT HOME WITH PHILL ”

TEESING SYSTEMS

Teesing Systems has more than 10 years of experience worldwide in alternative fuel projects with an expertise in the field of CNG (compressed natural gas). Recently our product range has been extended with the home fuelling appliance for CNG vehicles named Phill.

PHILL

With Phill you no longer need to go to public filling stations to refuel anymore. You now have the facility and the advantage to refuel your car at home or at your company. Your car is refuelled while you sleep and in the morning you drive off again with a full tank.

It couldn't be more simple. You don't need any special permit. Phill is certified as a household appliance, just like any other consumer products available on the Dutch market. The product is connected to the normal gas mains, which is standard in the vast majority of the Netherlands.

WHY CNG/ COMPRESSED NATURAL GAS?

CNG is the cleanest fossil alternative for the current fuels and will be still available at least till the end of this century. The advantage of CNG is that it is not only cleaner than other fuels; it is also far cheaper. You save money while protecting the environment!

“WHEN YOU COME **HOME** YOU JUST CONNECT
YOUR CAR AND IT IS **REFUELLED DURING THE NIGHT.**”
